SUMMARY

Final-year Software Engineering student at FPT University, focusing on back-end development with ASP.NET Core, C#, PostgreSQL, and SQL Server. I have worked on several academic and internship projects involving REST APIs, authentication, payment integration, real-time notifications, background jobs, and database design. I am looking for a Back-End Developer internship or fresher role where I can continue improving my backend skills in real projects.

EDUCATION

FPT University, Ho Chi Minh City **2023 - 2026 (Expected)**

B.S. in Software Engineering

GPA: 8.29/10

TECHNICAL SKILLS

Product & Analytical	System Design, Requirements Analysis, Agile/Scrum, Problem-solving
Languages	C#, Java, SQL.
Back-End & Frameworks:	ASP.NET, MVC, REST APIs
Database Management Systems	PostgreSQL, MS SQL Server
Tools & Platforms:	Docker, Git, Postman, Jira, Redis, AWS Rekognition, Cloudinary, Firebase FCM, SePay, VNPay

EXPERIENCE

Công ty Cổ phần Giải pháp Tổng thể Kỷ Nguyên Số (KNS), Ho Chi Minh City ***May 2024 - Aug 2024***

Back-End Developer Intern

- Maintained and improved existing back-end systems built with C# and ASP.NET Core
- Investigated and resolved bugs in RESTful APIs, improving system stability
- Worked with PostgreSQL databases and applied Entity Framework Core for data access
- Gained hands-on experience with Git version control and agile team workflows

CERTIFICATIONS & ACTIVITIES

Academic Excellence Recognition, FPT University: 1 Excellent Student award and 4 Honorable Student awards	
Champion of the online Robotics competition organized by the Centre of Digital Excellence (CODE), RMIT University.	**2021**

PROJECTS

STOMS — Centralized Operations Management System | Backend Developer, Mobile Developer **Jan 2026 - Apr 2026**

| *ASP.NET Core , PostgreSQL, Entity Framework , SignalR, Hangfire, AWS Rekognition, Docker, Flutter*

- Worked as team leader in a 5-member capstone team to build an internal operations management system for FSTEM, a STEM-AI teaching organization.
- Developed backend modules for personnel assignment, attendance tracking, event management, equipment borrowing, and fund management.
- Integrated AWS Rekognition to support face-recognition attendance from group photos, reducing the need for manual check-in records.
- Designed and implemented a personnel suggestion feature that recommends suitable members for tasks based on role, skills, and current workload.
- Built real-time notification features with SignalR and scheduled background jobs with Hangfire for reminders and automatic status updates.
- Designed the main PostgreSQL database structure and containerized the application with Docker for deployment.

ASA — SaaS for Retail Shops | Backend Developer **Sep 2025 - Nov 2025**

| *ASP.NET Core, SQL Server, Entity Framework, SignalR, FCM, SePay, Cloudinary, JWT Auth*

- Built backend features for a multi-tenant retail management platform with separate services for shop tenants and platform administration.
- Implemented the order pricing flow, including promotions, vouchers, customer-rank discounts, and final order calculation.
- Integrated SePay payment with VietQR generation, webhook verification, and order status updates after successful payment.
- Handled payment confirmation logic to update inventory, calculate item profit, and trigger low-stock alerts.
- Added real-time updates for payment and inventory events using SignalR and Firebase Cloud Messaging.
- Implemented subscription-based feature access using a custom RequireFeature attribute to control API usage by plan tier.
- Built shift opening/closing features with revenue, order, and profit summaries, including Excel export for reports.
- Developed a customer ranking module with tiered discount rules to support customer loyalty features.
- Added basic AI chatbot features to help shop owners query revenue, inventory, and product performance data.

Fire Warrior in the Demon World — 2D Action Platformer | Game Developer **May 2025 - Jul 2025**

| *Unity, C#, 2D Physics, Animator State Machine, New Input System, PlayerPrefs*

- Designed and implemented Map 5 (Demon Fortress — the final stage) end-to-end: multiple mini-boss types (DemonBat, DemonHornRed, EvilWizard), a final boss encounter, saw traps, toxic zones, moving platforms, waterfall platforms, ladder climbing, and auto-closing gates
- Built the full in-game equipment shop in the Home Village hub — item browsing, stat detail panel, coin-based purchase logic, and owned-item state management
- Developed a gift code system with NPC interaction panel; codes trigger stat changes, gold rewards.
- Implemented an in-game AI advisor NPC that provides contextual hints and guidance to the player during gameplay
- Maintained cross-scene data persistence using PlayerPrefs for inventory, coins, and player stats shared across 5 independently developed maps
